

Managed Services

There are several advantages to owning your own eDiscovery platform or utilizing a SaaS model, and with today's new and emerging platforms, the barrier to entry has never been lower. With ID Managed Services you can revolutionize your discovery process, allowing you to diversify and augment your software offerings while achieving the highest security, reliability, and cost transparency. This peace of mind comes without having to heavily invest in infrastructure, software, training, or personnel.

ID Managed Services sets itself apart by offering the largest breadth of software options, cutting-edge infrastructure support, unmatched security, world-class expertise, and customization to seamlessly integrate into your enterprise.

The benefits include:

SECURITY

ISO 27001 certified, PCI DSS validated, SOC 1 Type 2, Soc 2 Type 2, and our FedRAMP & StateRAMP authorization affords your the same security the government requires for the world's most sensitive data.

UNPARALLELED EXPERTS

The world-class subject-matter experts at Innovative Driven are now an extension of your team and help build out your practice so you can help your clients win.

BEST-OF-BREED TECHNOLOGY

End-to-end platform and in-house built platform options with best-of-breed software.

TAILORED WORKFLOWS

We create an experience crafted to meet the needs of your organization.

MARKETING

Our marketing team works with yours to create both internal and external campaigns so you get the most out of our partnership. From social media campaigns to content and collateral - we work together every step of the way.

ENDLESS SUPPORT

24/7 domestic overflow support and access to litigation support personnel, project managers, data specialists, forensics technicians, managed review attorneys, and world-class consultants.

COST RECOVERY

Enjoy business intelligence on spend and user utilization. We provide data and reports to help you make the best business decisions.

SCALABILITY

Infinite scale without the commitment to long term capital expenditures; scalable data center options to meet computing and storage demands.
